

CrestWatch

Life Story Ledger — Behavioral Fraud Intelligence

Every real person's financial life tells a coherent story. Fraud rings don't.

5,000

transactions monitored

294

account life stories built

\$0

flagged by existing rules

INPUT

5,000 transactions · 294 accounts · 90 days · Crestline Community Bank

AGENT 1 — PROFILER

Build a life story for every account

What kind of human does this account belong to?

- When do they pay? (active hours)
- Who do they pay? (counterparty graph)
- What do they buy? (merchant fingerprint)
- Account age vs. first transaction date

Output: Plain-English life story per account

"Regular NJ commuter. Weekday grocery + fuel. Consistent since 2024." vs. "No believable human pattern."

AGENT 2 — SCORER

Score each account's narrative plausibility

Does this financial story make sense for a real human?

- Score 0-100: coherent vs. hollow
- Flag accounts with <20% plausibility
- Track cumulative implausible spend
- Trigger at \$50K threshold per cluster

Output: Plausibility score + cumulative exposure tracker

AC-0001: 8% plausible — 100% night txns, opened Feb 2026, every transaction just under \$1,000

AGENT 3 — INVESTIGATOR

Connect hollow accounts into a coordinated ring

Log every reason — no 'AI said so', only specific behavioral evidence

- All 5 accounts opened in 8-day window
- All 5 operate 80-100% at night only
- Every transaction under \$1,000 (structuring)
- Recommend: ESCALATE · SAR · Freeze

Output: Named ring, severity rating, per-account action with logged reason

"AC-0005: FREEZE — 100% of 83 transactions at night. Opened same day as AC-0009."

AGENT 4 — NARRATOR
